About This Game

[PLAY THE FULL ALPHA FOR FREE THROUGH THE DEMO!]

A voxel-based 3D sandbox set in the never-ending darkness of space. Create your own ships, explore new galaxies, stars and planets. Discover and salvage space stations, fight against pirates or opposing factions in multiplayer. Equip your ships with completely customisable weapons and conquer the galaxy. Trade and make a fortune, mass produce materials in gigantic factories. Design your very own space station. Create warp gates and network the universe at your front door.

The universe is a vast, mystical, beautiful, awe-inspiring place.... the universe is yours.

Built for scalability to facilitate massive fully interactable objects, almost anything is possible. Gameplay elements have been skillfully constructed to bring the ultimate space sandbox experience.

Dive into your own unique universe, and choose your path.

Key Features:

- **Procedurally generated infinite universe, with quadrillions of galaxies** - The universe is massive. It'd take approximately 10,000 years to cross from one end to the other! Singleplayer and Multiplayer worlds can be heavily customised with our extensive config options.
- **Developed for scalability**- We have a broad range of graphical and performance options that cater to our low-end users

as well as those with heavy rigs and servers.

- **Advanced Build Tools** - Powerful and easy to use building tools, quickly design awesome ships, stations and bases. Including functions: Copy & paste, undo, redo, replace, symmetry modes, shape assistance systems (spheres, cycles, torus and more) and rotation of templates.
- **Modular Weapon Systems** - Combine weapon systems for countless configurations of weapons. From sniper beams to swarm missiles.
- **Comprehensive Rail & Logic Systems** - Use the rail system to build moving parts. You can do anything from simple elevators, sliding or rotating doors, to complex cranes.

Tinker with our logic systems to control any system in the game, be it weapons, lights, rails, or explosives. Logic covers all basic gate types for convenient use (AND, OR, NOT, DELAY, Flip-Flop), allows in flight control and wireless connections between entities. You can use it for simple things like timers, switches, buttons. Or, build complex systems like working clocks and even a real CPU.

- **Community multiplayer (dedicated servers)** - Play with others in our community hosted servers. Our configs allow administrators to customise core game mechanics for a tailored experience. Most settings can be tweaked to squeeze the best performance out of hardware.
- **Platform independent (Windows, Linux, Mac)** - StarMade is completely platform independent. We support the three most widely used operating systems.
- **Free to play in alpha** - We offer the full game free to play while in alpha development. Play our game through this period for free while in return we receive invaluable feedback and bug reports.

Title: StarMade
Genre: Action, Adventure, Indie, RPG, Simulation, Strategy, Early Access
Developer:
Schine, GmbH
Publisher:
Schine, GmbH
Release Date: 27 Nov, 2014

b4d347fde0

Minimum:

OS: Windows 7 - 64 bit

Processor: Intel Core i3 (2nd Generation and above) | AMD FX 6xxx or equivalent

Memory: 4 GB RAM

Graphics: Nvidia GeForce GTX 260, 275, 280, 460 SE, 550 Ti | AMD Radeon HD 4870, 5770, 4890, 5830, 6770, 6790 or equivalent with OpenGL 2.1

Network: Broadband Internet connection

Storage: 3 GB available space

Additional Notes: 2GB of memory must be available for StarMade. Lower specs may work by modifying graphics and other performance options. Try out our demo to get an indication for your system. System components such as Integrated Graphics cards may not be supported. Requirements may change in further updates.
